## ENTERPRISE MOBILITY MANAGEMENT

Be one step ahead of competition and get control over your mobile devices and corporate data.

Enterprise Mobile Management (EMM) is a comprehensive solution for managing mobile devices (business and privately owned), mobile applications and internal documents. Mobile Device Management (MDM) is used to integrate mobile devices into the corporate infrastructure so that employees can work quickly and effectively on their smartphone or tablet.

EMM is basically a corporate strategy for mobile devices and their use in the corporate environment. These mobile platforms offer a unique opportunity to increase the productivity of your business while providing a safe environment in which to work with corporate data.

EMM covers three types of mobile management, each serving a specific need.

### ➤ Mobile Device Management MDM

MANAGE AND SECURE IOS, ANDROID, WINDOWS PHONE, BLACKBERRY

### ➤ Mobile Application Management MAM

CONTROL ACCESS TO INTERNALLY DEVELOPED AND COMMERCIALY AVAILABLE MOBILE APPS

### ➤ Mobile Content Management MCM

MANAGE AND SECURE SENSITIVE CORPORATE DATA

For example, MDM can handle authorized/unauthorized network access, connectivity, remote data wipe or user access management. On the other hand, MCM can control sensitive data sent by e-mail.

EMM is not just an element of security. The right EMM strategy can help mobile users achieve higher productivity. With Enterprise App Store users can download new mobile applications.

EMM will help you solve the issue of corporate mobility. It offers security and control over mobile devices including simple administration and management.

For many years MobileIron has been involved in development of EMM solutions that are flexible towards business as well as end users and are device- and application-independent. MobileIron can be implemented directly within a company using the cloud solution (SaaS). MDM solution supports a wide range of platforms including iOS, Android, Windows Phone, Windows 8.1 and Mac OS X. MobileIron is a suitable solution for companies looking for the best solution for their mobile applications and security.

### Key benefits:

- ▶ **Highly satisfied users** as evident from all customer reference interviews
- ▶ **High focus on security standards** – FIPS (Federal Information Processing Standard 140-2) holder
- ▶ MobileIron is the only EMM provider on the market that allows **remote administrator access to mobile device iOS for support purposes**

BES 10 is primarily intended for companies supporting BlackBerry 10 devices. The current most up-to-date version can be implemented either directly in the company or via cloud (SaaS). BES 10 supports the latest Blackberry 10 devices, but also other operating systems such as iOS or Android. BES 10 is the best choice for companies that have decided to work with Blackberry devices.

### Key benefits:

- ▶ BES 10 MDM solution **has the strongest support** for Blackberry mobile devices
- ▶ Blackberry has many years of **experience with corporate security** and sophisticated multi-level customer support.

Citrix entered the mobile solution market with the acquisition of Zenprise in January 2013. Citrix has expanded the original Zenprise mobile solution to work with the mobile applications Worx, Citrix ShareFile for document sharing and security gateway Netscaler. Citrix can be installed either directly on corporate infrastructure or as a software service using a cloud option. XenMobile MDM solution supports iOS, Android and Windows Phone platforms. Citrix is the right choice for companies requiring secure space for Windows, web and mobile applications, as well as companies using other Citrix services such as XenDesktop, XenApp and Netscaler.

### Key benefits:

- ▶ Citrix has developed **a comprehensive solution for mobile applications** using a Worx Mobile Apps package that also allows third party applications in its Worx App Store
- ▶ Citrix ShareFile is one of the most complete and flexible tools for **internal document administration**
- ▶ Citrix receives **a very positive evaluation from both online customers** as well as based on direct interaction

Samsung Knox is a security solution for mobile devices running on Android. It brings a completely new standard of corporate data protection and access. Mobile devices with Samsung Knox installed are completely secure – on the hardware side, for system start-up as well as for applications. Samsung Knox has achieved FIPS 140-2 certification.

## EMM WILL ADAPT TO YOUR REQUIREMENTS

Mobile solutions are created in a way that offers customers maximum security for corporate mobility. These systems are able to adapt to rapid development of the mobility world and ensure security of data downloaded and used by mobile devices.

Mobile solutions are flexible regardless of:

1. **Device type** (smartphone, tablet)
2. **Operating system** (iOS, Android, Windows Phone)
3. **Number of users** (both small and large companies)
4. **System implementation** (at customer location or in the cloud)

What EMM offers:

- Simple mobile device management from a central server.
- Easy and secure internal content access anytime anywhere.
- Internal data and sensitive information security.
- Fast setup over-the-air (without the need to connect to the computer).
- Dangerous device in network detection and option to block access to internal network.
- Secure application distribution among employees and option to set up internal app store (Enterprise Application Store).
- Internal content sharing control (documents, e-mail attachments and other content).

## WHY YOU SHOULD CHOOSE SYSTEM4U AS YOUR PARTNER

- Comprehensive mobility services. All inclusive services that take care of everything for you!
- Mobile strategy development and selection of a suitable solution for your enterprise needs.
- Licencing and full system implementation including initial setup.
- MDM solution regular tests and check-ups.
- Internal system integration (Intranet, SharePoint, PKI).
- Free customer service provided by a team of professionals trained directly by MDM providers.
- Mobile applications implementation and maintenance.
- Regular updates and new feature training.
